Methodology note

In keeping with the AAPOR Transparency Initiative, any public release of this study should disclose the sponsor and research organization, exact questionnaire wording, population under study, sample source and recruitment method, mode(s) of data collection, field dates, unweighted sample size, weighting variables and targets, data quality procedures, and the general limitations of survey research. The following methodological note is consistent with the Initiative.

This study captures public opinion of a random sample of likely voters in Texas. The survey was sponsored by Texas Public Policy Foundation and conducted by employees of Overton Insights. Respondents were recruited through MMS texts. A total of 1,167 completed interviews is included in the final dataset. Fieldwork was conducted from August 24, 2026 to August 26, 2026. Respondents completed a self-administered online questionnaire in English.

This report presents weighted results and the exact wording of the questions reported. Results were weighted on gender, age, education, and race to reflect the likely-voter population in Texas.

As with all survey research, the results are subject to potential sources of error, including nonresponse bias, coverage limitations, measurement error, weighting effects, and question-wording or order effects.
